

Dear Hiring Manager,

I am writing to express my interest in the Software Engineer position at your company. I am a computer engineer with five years of experience spanning frontend, backend, and full stack roles — working with React/Next.js, Java/Spring Boot, C#/.NET, and NestJS across fintech, consulting, and industry 4.0 environments.

Most recently, I have been building an Industry 4.0 MES platform at SKA, where I develop backend services in C#/.NET responsible for managing production state and coordinating manufacturing workflows. Before that, I worked as a full stack freelancer delivering web applications with Next.js, NestJS, GraphQL, and MongoDB. At CWI Software, I contributed to two engagements: building microservices in Java/Spring Boot with hexagonal architecture for Banco BV, and developing a React/Next.js SPA for Connecta with full test coverage using Jest, React Testing Library, and Cypress.

This range of experience means I can contribute meaningfully across the stack — whether the team needs someone to own a frontend feature, design an API, or reason about system architecture.

I am particularly interested in this opportunity because of my passion for well-crafted software and teams that take engineering quality seriously.

Thank you for your time. I would be happy to discuss how my background fits what you are building.

Sincerely, Nicolas Krüger
